

Rita Levi-Montalcini: Discoverer Of Nerve Growth Factor

by Lisa Yount

Dr. Rita Levi-Montalcini, a Revolutionary in the Study of the Brain Main achievements: Discovery of nerve growth factor. Rita Levi-Montalcini was an Italian neurologist who, together with colleague Stanley Cohen, received the Nobel Prize in Physiology or Medicine in 1986 for their discovery of nerve growth factor (NGF). Rita Levi-Montalcini is a Nobel Laureate recognized for her work in the discovery and characterization of nerve growth factor. Nerve growth factor (NGF) was discovered by Rita Levi-Montalcini and Stanley Cohen in the 1950s. The discovery of nerve growth factor (NGF) by Rita Levi-Montalcini in the 1950s represents an important milestone in the processes that led to modern cell biology.
